

## LOADING AND ACCESSORIES

### **▲ WARNING**

**\*To prevent an accident, use extreme care when adding and riding with accessories and cargo. Addition of accessories and cargo can reduce a motorcycle's stability, performance and safe operating speed. Never ride an accessory-equipped motorcycle at speeds above 130 km/h (80 mph). And remember that this 130 km/h (80 mph) limit may be reduced by installation of non-Honda accessories, improper loading, worn tyres and overall motorcycle condition, poor road or weather conditions. These general guidelines may help you decide whether or how to equip your motorcycle and how to load it safely.**

### **Loading**

The combined weight of the rider, passenger, cargo and additional accessories must not exceed the maximum weight capacity:

190 kg (418.9 lbs) · · Except for MX

166 kg (366.0 lbs) · · MX

Cargo weight alone should not exceed:

27 kg (60 lbs)

1. Keep cargo and accessory weight low and close to the center of the motorcycle. Load weight equally on both sides to minimize imbalance. As weight is located further from the motorcycle's center of gravity, handling is proportionally affected.
2. Adjust tyre pressure (page 29), front suspension (page 13) and rear suspension (page 14) to suit load weight and riding conditions.
