### **Starting & Stopping the Engine**

2. With the throttle slightly open, operate the kickstarter. Kick from the top of the stroke through to the bottom with a rapid, continuous motion.

### NOTICE

Allowing the kickstarter to snap back freely against the pedal stop can damage the engine case.

- 3. Warm up the engine by opening and closing the throttle slightly.
- 4. About a quarter-minute after the engine starts, push the choke lever down all the way to fully OFF (B).
- 5. If idling is unstable, open the throttle slightly.

# High Air Temperature 35°C (95°F) or above

- 1. Do not use the choke.
- 2. Start the engine following step 2 under *Normal Air Temperature*.

## Low Air Temperature 10°C (50°F) or below

- 1. Follow steps 1 − 2 under *Normal Air Temperature*.
- 2. Warm up the engine by opening and closing the throttle slightly.
- 3. Continue warming up the engine until it idles smoothly and responds to the throttle with the choke lever (1) OFF (B).

#### **NOTICE**

Extended use of the choke may impair piston and cylinder wall lubrication and damage the engine.
