

## ■ PREPARATION FOR RIDING

Perform the following tasks before riding.

1. Loosen the handle bar knob, unfold the handle bar to the normal riding position, insert the stopper located at the base of the handle bar into the handle bar holder groove, and then securely tighten the knob.

**Note: Turn the handle fully in both directions to assure that the brake cables are not being pulled.**

2. Raise the seat, install the battery and wire up the battery by connecting the red lead to the battery terminal and the blue lead to the terminal.

**Note: When installing the battery, make sure that the battery vent tube is not pinched.**

3. Check for fuel in the tank and then position the fuel tank valve to "ON" position (refer to page 16).
4. Turn the fuel valve, located on the left side of the carburetor, to the "ON" position (refer to page 17).
5. Check to make sure that both front and rear brakes are operating properly (refer to page 41~43).
