Tyre Repair

Refer to *Safety Precautions* on page 113.

A tyre that is repaired, either temporarily or permanently, will have lower speed and performance limits than a new or undamaged tyre.

A temporary repair can sometimes be made in an emergency situation. However, since a temporary repair may not hold, you must ride very slowly, preferably without any cargo, and have the tyre replaced or permanently repaired as soon as possible. (For more information on temporary repairs, see *If You Have a Flat Tyre*, page 219.)

A permanent repair, such as an internal plug patch, can be made if a tyre has only a small puncture in the tread area. However you may not be able to safely carry as much weight. If you choose to have a tyre repaired, be sure the repair work is performed by a professional.

If you have a tyre professionally repaired at a non-Honda facility, we recommend that you have the work checked by your dealer.
