

## Engine Idle Speed

2. Place your motorcycle on its side stand on a firm, level surface.
3. Turn the bolt (1) 90° counterclockwise and pull the right lower fairing (2) aside.
4. Shift into neutral. Start the engine.
5. Adjust idle speed with the throttle stop screw (3).

Idle speed (in neutral):  
**1,300 ± 100 rpm**
