

Answer Back System

The answer back system is a device to find the location of your motorcycle. When the immobilizer is active and you press the answer back button on the Honda SMART Key with the ignition switch in the OFF or (Lock) position, the turn signals light, the ignition switch ring lights, and the buzzer rings, informing you of your motorcycle's location. The ignition switch ring will light for about 1 minute.

The answer back system uses low-intensity radio waves. It may affect medical equipment such as a cardiac pacemaker.
