Riding in Reverse

Your motorcycle's reverse system allows you to back out of a parking position at slow speed.

Make sure there are no obstacles or people in the area. Avoid steep or uneven surfaces. Carrying a passenger while reversing is not recommended because it makes balance and control more difficult to maintain.

- 1. Sit astride the motorcycle, in your normal riding position, with both feet on the ground.
- 2. Make sure the transmission is in neutral (neutral indicator is ON) and the side stand is up.
- 3. Start the engine. (Make sure the RVS switch is OFF.)
- Push the RVS switch to ON, then make sure the reverse system indicator comes on

RIGHT HANDLEBAR

- 5. When you are ready to back up, push the start/reverse button and hold it in. The motorcycle will move in reverse as long as you hold the button in. To prevent battery discharge, do not push the start/reverse button more than a minute.
- 6. Guide the motorcycle backward cautiously, using your legs to maintain balance
 - Use extreme care to maintain balance while reversing on loose surfaces (sand, dirt, gravel) or grease-covered pavement.
