Problems That May Affect Off-road Utility Vehicle Exhaust Emissions

If you are aware of any of the following symptoms, have the vehicle inspected and repaired by your off-road utility vehicle dealer.

Symptoms:

1. Hard starting or stalling after starting
2. Rough idle
3. Misfiring or backfiring during acceleration
4. After-burning (backfiring)
5. Poor performance (driveability) and poor fuel economy

Federal regulations prohibit removing or disabling a device or element of design that may affect your engine's emission performance unless your Honda off-road utility vehicle will be used exclusively in competition.

If you modify your engine for use in sanctioned competition events, you must deface or destroy the emission control information label.
