

# Appearance Care

---

## Aluminum Wheel Maintenance

Refer to *Safety Precautions* on page 107.

Aluminum may corrode from contact with dirt, mud, or road salt. Clean the wheels after driving through any of these substances. Use a wet sponge and mild detergent. Avoid stiff brushes, steel wool, or cleaners containing abrasives or chemical compounds.

After washing, rinse with plenty of water and dry with a clean cloth. Do not use wax or polishing compounds on matte painted surface.

## Exhaust Pipe and Muffler Maintenance

Refer to *Safety Precautions* on page 107.

The exhaust pipe and muffler are stainless steel but may become stained by mud or dust. Make sure no flammable materials or debris are sticking to the exhaust system. If any flammable materials or debris is found, remove it.

To remove mud or dust, use a wet sponge and a liquid kitchen abrasive, then rinse well with clean water. Dry with chamois or a soft towel.

If necessary, remove heat stains by using a commercially available fine texture compound. Then rinse by the same manner as removing mud or dust.
