

# Indicators & Displays

---

## Fuel gauge

The fuel gauge shows the approximate fuel supply available in a graduated display with the fuel symbol. The fuel tank capacity is:

7.9 US gal (30 ℓ)

Regardless of what mode the display is in, when the fuel level reaches only one segment remaining, the display will automatically switch to the fuel gauge display. You should refuel as soon as possible.

The amount of fuel left in the tank with the vehicle on a firm, level surface is approximately:

2.76 US gal (10.5 ℓ)

The fuel gauge and LO FUEL will begin to blink alternately when the fuel level decreases further.
