

Driving Guidelines

Off-road Driving Considerations

Your Honda SXS was designed and intended for off-road use. In the event that you must drive on a paved surface, be aware that your Honda SXS will feel and handle different than it does on dirt. The tires will also wear much faster.

Vehicle Design

The Honda SXS handles somewhat differently from on-highway vehicles due in part to features that allow it to perform its role as an off-highway recreational vehicle. For example, this Honda SXS has a higher center of gravity than cars designed for use only on pavement. It is also equipped with large low-pressure tires that allow good traction in sand, loose dirt, wet grass and other low-traction surfaces.

These advantages come at some cost. Because your vehicle is taller and rides higher off the ground, it can more easily tip or roll over if you make abrupt turns or drive on sloped terrain.

Off-highway Environments

Driving on private property, or in approved off-highway areas, means you leave a generally predictable and orderly world behind. You won't find lane markers or traffic signals, and no one will be there to warn you of trouble ahead. It's up to you to assess situations and drive within limits. The terrain has limits (it may be too steep or bumpy, for example). The vehicle has limits (e.g., traction, stability, and power). And you may be limited by lack of experience.
