## If You Have a Flat Tire

## Installation

- 1. Position the wheel.
- 2. Position the wheel nuts.
- 3. Hand-tighten the wheel nuts on the wheel, then lower the ATV to the ground before tightening the nuts in a crisscross (rather than circular) pattern to the specified torque:

40 lbf·ft (54 N·m, 5.5 kgf·m)

If a torque wrench was not used for installation, see your dealer as soon as possible to verify proper assembly. Improper assembly may lead to loss of braking capability.
