

Engine Oil

Engine oil quality is a major factor that affects both the performance and the service life of the engine.

Using the proper oil (page 100), and regularly checking, adding, and changing oil will help extend your engine's life. Even the best oil wears out. Changing oil helps get rid of dirt and deposits in the engine. Operating the engine with old or dirty oil can damage your engine. Running the engine with insufficient oil can cause serious damage to the engine and transmission.

Change the engine oil as specified in the maintenance schedule on page 87. When running in very dusty conditions, oil changes should be performed more frequently than specified in the maintenance schedule.
