## If You Have a Flat Tire

Muffler Installation
Before installing the muffler, replace the muffler gasket with a new gasket.

1. Tighten the nuts and bolts to the specified torques:
exhaust pipe joint nut:
$18 \mathrm{lbf} \cdot \mathrm{ft}(25 \mathrm{~N} \cdot \mathrm{~m}, 2.5 \mathrm{kgf} \cdot \mathrm{m})$
muffler bracket nut:
$20 \mathrm{lbf} \cdot \mathrm{ft}(27 \mathrm{~N} \cdot \mathrm{~m}, 2.8 \mathrm{kgf} \cdot \mathrm{m})$
2. Reinstall the right footpeg.

Tighten the nut and bolts to the specified torque:
footpeg bolt $A, B$ and nut: 29 lbf.ft (39 N•m , $4.0 \mathrm{kgf} \cdot \mathrm{m}$ )

If a torque wrench is not used for installation, see your dealer as soon as possible to verify proper assembly. Improper assembly may lead to loss of braking capability.
