

### Adjusting the Rear Suspension

Adjusting the suspension requires a pin spanner. We recommend that you have your motorcycle serviced by your dealer.

#### Spring Preload

You can adjust the spring preload by the adjuster to suit the load or the road surface. Use the pin spanner to turn the adjuster. Position 1 is for a decrease spring preload (soft), or turn the position 3 to 5 increase spring preload (hard). The standard position is 2.

Attempting to adjust directly from 1 to 5 or 5 to 1 may damage the shock absorber.

#### NOTICE

Do not attempt to disassemble, service, or improperly dispose of the damper. See your dealer.

Adjust both left and right shock absorbers to the same spring preload.
